Part IV. WRITING

Now I will tell a story how Mars became a habitable Planet.

In 2035, Elon Musk had sent first people in Mars. They had ^{gr + 2} built a dome and started to terraform Mars. After that, in 2040, One Million ^{gr} people were in Mars, colonizing and terraforming it, including myself.

At first, it was hard to get used to space costume, but I ^{gr} did. The work was not hard, all I needed to do is to train newbies how ^{gr} to get in the space costumes quick and correct, and after, to show ^{gr} them what they will do.

Now, Mars is a home for hundred millions of people, and it will only grow.

Part IV. WRITING

On Feb 22nd of February, I emailed my friend Sam:

Hi ~~Hey~~ Sam,

How are you? How is it on KB-372? Is it safe there?

The next day I already got the answer: gr

Hello Ben!

I am perfectly fine on KB-372. SpaceX built me the big house there, which looks like yours. ^{gr}
 Also I have lots of food, some is from Earth, some grows on KB-372. There is not much life here. Only humans and a black entity we call Pursuet. Pursuet is friendly unless you break a green stone. There are lots of those on KB-372. Once you break one, you will be chased by Pursuet. Nobody can escape him. That's the only danger here. gr

I invite you to come to KB-327. I want to meet you!

On 25th of January, I will have a plane going to KB-327, so I have not much time, so I can't tell you anything anymore. ^{plumet 20x gr}

Life on another planet

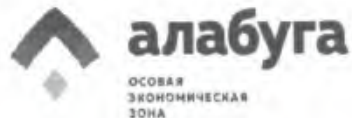

Have you ever wondered how life on another planet looks like? Well, today we will see my opinion on it. If life exists on another planet it most likely to be plants or bacteria, but very small creatures. But let's think about something more interesting, like smart creatures, just as humans. They can't be have a much more technologies, than as since they would have already found us. The planet might look like Earth, with oceans, forest, ~~and~~ desert and etc. But it has another matter's plan matter's land's placement. The creatures on this planet can be anyone. It can be any animal, even humans, like as, it can be dinosaurs, or even something we can't describe!

In conclusion, I can say that life on another planet might be very various and interesting!

Part IV. WRITING

Teeny-tiny Aliens

gr When we are talking about life on another planets most of people think about huge scary monsters that want to kill us. However maybe it is not true. 28

gr Far-far away there is a tiny planet (even smaller than a Mercury). But when you come closer you can see oceans and seas, forests and rivers. You can think that there is no any aliens there, but even this peaceful planet has its own secrets. 76

gr If you will come on this planet and build there a house, ~~at~~ as the next day you can see a lot of tiny papers with arguments. The reason is that on the planet is living small ^{and} invisible aliens. They are calling themselves "Teeny" hundreds years ago they used an old magic to become invisible. You can see them only if you sign a tiny paper. 142

Part IV. WRITING

The year is 2030. Scientists discovered strange cosmic object flying rapidly towards Earth. After intense research, it was found that it is a spaceship. All information about it was classified. Armies around the world started military trainings. But spaceship was too fast. Upon getting closer to earth, "Object-5267" slowed down. It lands 520 kilometers away from Saratov. Governments send armies, but also scientists. After setting communication with aliens it was found out that they are friendly. Also, they invited us to their planet. We accepted their invitation, and our 15 best scientists were sent with aliens.

As scientists approached alien's planet, they became shocked. All planet was filled with trees, and most of buildings were inside of the biggest trees. Also, only on that planet aliens were photoed. Their body color is still green, they are human-like, but they have 3 eyes, and 3 hands, one of them is located at their stomach. Most of the time they research new technologies, study physics and biology. Trees colours are: green, yellow, violet, brown and red. Most of the trees have structure, similar to our.

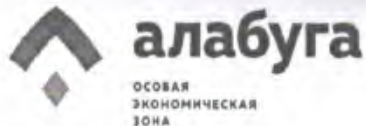

After their research, scientists fly back to Earth. They studied a lot of new revolutionary technologies, physics law and chemical elements. They were shocked that whole alien's planet was united under a single government, so they can spend less money on armies. That visit heavily impacted our planet. World became a better place to live, and we got a strong ally, that will help us, and we will help them.

Part IV. WRITING

Now I will tell you about life on the Mars. Mars is red coloured planet and it is the fourth from the sun, after Earth. On the planets surface there are lots of craters, volcanoes and spirits. You can breathe on this planet like on the Earth because there is atmosphere. What about the temperature? In summer afternoon the maximum is $+40^{\circ}$ and at night $+12^{\circ}$. In winter it is freezing, about -30° .

People who live there, called marsians, but they are not aliens. They aren't afraid of climate on their planet, because they wear special suits. Suits have automatic heating and air conditioning. Marsians built lots of cities. Cities have schools, hospitals, police and other useful things.

So the life on the Mars is almost same as on the Earth, but there is always peace and aren't any illnesses.

Part IV. WRITING

Life on another planets

For the introduction I would like to say that I believe what the other planets with life are real. lex

I think that planet looks a little bit different from the Earth. The planet with civilization is most likely green with some water, ~~because~~ because water is needed for life to born. This planet is big comparing to the Earth. This planet has a lot of futuristic cities and other subjects. I think there already are flying cars, teleports and trips to other planets, like our resorts. You can modify your body on this planet. Most likely you can change your eyes to cyborg eyes and become the "walking laser gun". I think the name of this planet ~~is~~ is ~~strange~~ "strange, something like OS 961Fz". People on this planet speak only one language and that's comfy. It's simple for them, but it's impossible for us to understand. gr

For conclusion I would like to say what we sometimes will reach this level and will explore galaxies, black holes and other planets. gr

Part IV. WRITING

Once upon a time there was a ~~like~~ blue planet with cyan stripes all over it. But it wasn't just an ordinary planet, it had a life on it. There were aliens with four legs and six arms.

Like on our planet Earth they had different jobs. Also they had three countries called „Red”, „Blue”, „Green”. Aliens that were living in „Red” wore red T-shirts and red shorts. Aliens that were living in „Blue” wore blue jeans and blue shirts. Aliens in „Green” wore green pants and green jackets.

„Red” aliens were the best cooks. They were trading the food for different stuff. The „Blue” aliens were the best builders. They were building awesome houses for other countries. Meanwhile the „Green” aliens were the best farmers. They had a lot of fruits and vegetables for „Red” aliens to cook.

Everyone were helping each other, and the life on this planet was wonderful!

The following table shows the results of the experiment. The data is presented in a table with columns for Time (min), Distance (m), and Velocity (m/s). The velocity is calculated as the distance divided by the time.

Time (min)	Distance (m)	Velocity (m/s)
0	0	0
10	10	1.0
20	20	2.0
30	30	3.0
40	40	4.0
50	50	5.0
60	60	6.0
70	70	7.0
80	80	8.0
90	90	9.0
100	100	10.0

The graph shows a linear relationship between time and distance, indicating constant acceleration. The slope of the line represents the acceleration, which is 10 m/s².

Part IV. WRITING

Once upon a time, our planet Earth got a new planet friend. Nobody knew how it ended up here, but people said that this mysterious planet had life on it. Since it was so similar to Earth, scientists named it Earth the second. Then they sent special robots to the planet to see who lives there. Finally, after about a year, they saw footage of fluffy crocodiles in the water. Our society never saw these types of crocodiles on planet Earth. A little bit after that footage, scientists saw footage of rainbow sandwiches with cat heads flying in the dark sky. Pretty weird, right? Either way, people might move to that planet since it has oxygen and food resources. But that will not happen anytime soon.

The portal to Nair

You couldn't believe this story, but on the very sunny day in my school, the entrance door suddenly opened a mysterious portal. When I saw it, it had been almost closed, but at the drop of a hat, I dashed to it and jumped there. I closed my eyes. When I opened them I appeared on another planet. That planet was comfortably warm, but the sun was blinding. Also the earth on this planet was red and the water was green. Then I saw a red giant alien. I asked him: "Where am I?". He said that this planet was called Nair. After that he led me to the city where they created different machines such as portal maker. He told me that their civilization of Nair men randomly opened the portal in my school. They apologized and bring me back to school, but then I woke up and realize that all that was were a dream.

Hello!

Have you heard about the new planet that NASA found? It's really funky! First of all, it looks like Earth but if the grass was purple instead of green! And when NASA sent a rover to explore, it saw huge giraffes with gigantic necks! Those giraffes eat leaves off skyscraper sized trees! Another animal that lives there is a green lion. They look normal apart from their color, but they jump so high and so fast that it's impossible to see them do it! And they do so to reach the giraffes up in the sky and eat them. Another thing this planet has is a really weird pale-looking sky. The water is weirdly colored as well, as its color is red! The planet looks crazy cool, and I can't wait to visit it.

"Topiter"

Have you ever heard about Jupiter? It's a d big planet with an asteroid ring. It looks normal, but is it?

I travelled to Jupiter to find it out, and that's what I realised. Jupiter has life on it! My assistant Elon Musk tried to have a contact with aliens, but they seem to be scared. I think we couldn't communicate with them. At least the ground is very interesting. It looks red, like a tomato. That's why I call Jupiter now "Topiter". We tried local food and were impressed! Salad with fruit taste like chocolate ice cream. We should get a recipe to be "kings on earth".

Then we were ready to fly back and... I heard my mom calling me. It was a dream! I wanted to try their salad again, pity.

Part IV. WRITING

Recently, scientists have found an interesting planet far in the space, they called it "EIP-137". It was located in a far star system. The EIP-137 has an atmosphere similar to Earth's. There lives many insects and animals, and they are different from those that live on Earth. They build colonies of their kindreds, and survive together. On this planet, there is a beautiful landscape. There is a purple sky, where you could see many stars. The forest here is big and wide, while the mountains is smaller, but shapes very interesting has a very interesting shapes. The animals and insects here is very smart: they in colonies could build a sort of bases, and attack their prey at best moments. I would like to live at this planet for a few days, but if it's could be possible.

Part IV. WRITING

gr Ever since humanity made a technological leap, they have created good and evil. People of earth became much more reliant on robots, AI, took their jobs and the earth was polluted like hell. Show this to a victorian era child and they'd think this is where sinners go. On the other hand, a select few people were chosen to go to mars. I was one of them, luckily or not. Living here wasn't so bad, we grew potatoes, explored, had fun, even played basketball! The outside was all orange and dark, as far as we know, there are zero aliens or anything like that. Although our water supplies quickly ran out due to earth's "vast clear oceans" being filled with garbage. We initiated our way back to earth, leaving potatoes and macwalkers behind. It was still better there rather on earth.

Part IV. WRITING

The Happiest ~~Planet~~ Planet.

Let me tell you about the most ~~cheerfull~~ cheerful planet in our university. From space it looks like a square with blue spots. When you land on it, you can see trees that grow upside down, rainbow that is heart-shaped and monsters who are the happiest living things ever.

All monsters are different, some are small and some are enormous. Only things that they eat are fruits and vegetables. Also they adore throwing parties with positive music. Monsters are devided into several groups; the one who sing, the one who dance and the one who produce the songs. Every month they have a "juice party" with a whole of time. There they present new songs and drink different drinks.

To end my story, I would like to add that monsters there have some routine as regular person. Would you like to visit this delightful planet?

Part IV. WRITING

In the galaxy of Equestria, far away from Milky Way and Earth, was a planet called Smart Horse. There were beautiful amazing views and rainbows could be seen all day. The main street, which was called the Horse Avenue, was decorated with statues of famous horses.

In the park there were male horses wearing three-piece suits and female horses wearing polka-dot dresses. There were also horses in sportsuits, who were running a marathon.

The president of that amazing planet was Silver Blaze, the horse from Conan Doyle book. His ministers were horses who were champions of jumping.

Most mares worked out in the fitness clubs and were paid for that job. Female and male horses worked in politics.

In the evenings most locals went to the Fun Horse Club. It was a place where you could play billiard or eat some delicious hay.

On that planet there was love and happiness for everyone. The horses lived happily together ever after.

Orange Alien

Once, ~~the~~ far far in the galaxy, there was a planet Scorpion. It was a planet without atmosphere. Everyone fled there. The people there were very strange. The teachers were red, the divers were blue. But there was one alien with orange skin. SP42

The aliens wanted to find another planet with people on it. Amazingly, they caught a signal from the planet Earth. They needed to build a spaceship. But years went past, but they couldn't built it. But suddenly the orange alien agreed to help. And from that moment, the aliens quickly finished building the spaceship. And after a few days, they were flying to the Earth!

The orange alien was the hero!

Part IV. WRITING

Some where far away in space was a planet, ~~It~~ It was lonely, it had no neighbours! ~~but~~ the planet had life on it! There were millions of aliens living on this small deserted planet! The planet itself was colorful, the clouds were light blue, the ground was a mix of orange and pink, the water was light green! on the planet lived small green aliens, they were smart, they didn't have a body. Their body was made of light & green slimy goo! The aliens were all happy, living in peace. They were all united, they didn't have a language but they could communicate with senses. The planet is really peaceful. I hope that one day Earth will be in peace too!

Part IV. WRITING

gr Once upon a time on the planet Illusium there lived small creatures, called illusiumians.

gr Illusium have had lots of forests, and illusiumians really liked them. And as about ^{let} this really amazing creatures, they were foxes. But don't think that they were common ^{or} foxes. They had nine tails! Illusiumians waved one or several tails if they need to tell something ^{or} each other. For example, when they had found an mushroom, they waved all their nine tails slowly. Yes, they really like mushrooms, but this tasty food was too large for them. So ^{let} when an illusiumian had found an mushroom, it called for help, and all its tribe together ^{gr} carried it to its hole.

sp In my opinion, this cute creatures were really busy and helpful, and we need to ^{gr} try to be alike them in character.

Part IV. WRITING

Everyone knows about the planets in the Solar System. But there are so much more planets other than those. We will talk about one today.

The planet looks like Earth, however, it has a giant core-like shape stretching through the center. We do not know what this is.

Shockingly, the planet contains life, just like on Earth! Unfortunately, it's not like the superintelligent aliens portrayed in sci-fi. It's more akin to plants.

There doesn't seem to be a lot of materials for them to use, so they grow by sucking out the DNA of other planets, consuming them. This leads to most planets being far away from each other, preventing them from growing close to them.

Exoplanets are very interesting. We look forward to finding more of these.

Part IV. WRITING

I want to tell you about life on another planet. The name of planet is Plyuck. It looks like a dessert with strange metal pillars coming from the ground. Most of those aliens travel by pepelatz - a strange machine, that can fly. Most of the water is turned into fuel, but you can create water from fuel too! The main currency is matchstick. They have police, and you need to bow down if you see police man. Also you need to bow down if you see someone who is born on this planet, as if they have yellow party on need to bow two times. A lot of people on this planet are liars, but there are also normal people too! All in all, this planet can be dangerous, if you don't know the rules, but if you find somebody, that can help you everything will be fine!

Part IV. WRITING

Once upon a time, there was a planet, called Lilly-Milly. Citizens, which lived there, called Millies. People from our planet did not even know, that somewhere in cosmos we have civilization except Earth, but ~~in one day~~ but Millies knew all about civilization in cosmos. There were some more planets, where people could live. In one day, one famous scientist from Earth found Lilly-Milly. He decided to go there. After six days of getting ready for flight, scientist was ready to go with four other cosmonauts and scientists. Millies was not ready to meet some guests, but citizens were friendly. For scientists from Earth started to slowly destroy Lilly-Milly with own laws and rules. Millies could not do anything with it. They were weak and they could not ask for help. In the end, planet Lilly-Milly was destroyed by evil people from Earth. Now, from Lilly-Milly we only have memories, some memories.

Yesterday I flew on my first trip to the planet Raruti. It's only eight hundred thousand km from my home. It all consists of pink and blue trees. And there is an island ~~with only two oceans and one sea here.~~ full of pink, orange, red and blue flowers. It's very interesting that there are only two oceans and one sea here. When I was walking on the planet I saw many amazing animals. I saw a blue tiger which was watching a small pink-blue bunny eat grass. I saw it when I climbed a tall tree. In the morning sky of the planet is red and at night changes to purple. But I didn't understand how I fell asleep.

Part IV. WRITING

Far away, in the Alpha Centaurus system, there is a planet called Gamma-11.

It is completely dark-grey with cyan circles on its surface. At first you may think that there is no life on it, but you're wrong. There is a civilisation that lives deep inside the planet!

^{gr} This creatures look like people, but there are some differences. They have no hair, ears or nose, they have red skin and tentacles instead of fingers. Their ruler is a giant spider! ^{bx}

^{sp} This civilisation has already built fifty-six cities inside Gamma-11. They speak on a strange language, that is not similar with any language on ^{gr} Earth. ^{qs}

That is all I know about this planet.

Part IV. WRITING

There was a far away planet called Mars. Gaint people with bright red skin lived there. They always had a face of thunder and would destroy everything and everyone on the ir path. One se a fearless explorer buided a spaceship and went to Mars. A gaint saw him and became furious. "Who are you?" - he roared - "Go away or I will step on you with my ginourmous foot!"

"I am a space explorer, and I came to see other formas of life!" - the explorer ansewerd from a boulder he was hiding behind. "I would like to stop you from de-stroxyng everything!" The gaint sat down and sobbed "I only want to find myself a friend!"

"Now now!" - said the explorer - No reason for the long face! Everyone is afraid of your anger. But if you want, I could be your first friend!"

"Oh yes please!" - The gaint answered.

From that day everyone knew the red planet Mars as the friendliest planet in the Universe!

Part IV. WRITING

~~Some where in this~~ There is a planet called Electronium somewhere in our Universe. It looks like a big bubble gum ball because all plants there are blue and all water is pink. All people there have superpowers, and they learn to control it as kids. Also, they are not like us - one their year is equal to our two hundred years. Of course they have kindergarten and schools like us. They have a few interesting ^{professions} ~~workings~~. For example, they have a such a profession as a witch. ~~this is a human mostly~~ Witches are people (mostly woman) who can change your fate by magic. Sounds cool, right? Also, there is no fishers in this world because all ~~fish~~ are too big to catch them. If you will try to catch one, it will catch you. ~~fish~~ kinds of fish are too big to catch them. If you will try to catch one, it will catch you. Back to professions, most professions and jobs are same to humanity ones. I can tell a many other facts about this wonderful planet, but I think I don't have so much words, so it's all. Electronium is a very interesting planet, and I think it would be cool to live there.

Part IV. WRITING

Our galaxy is pretty big. That means that anything can exist, including planets. NASA just discovered a strange planet which looks like a meat ball. One of the teams that saw the planet flew to and explored it and found the habitats of it. They could talk all human languages and said that their names were "Butchers" and the planet was called "NeepMeat". The Butchers didn't have any digital progress, but their technological progress had fully automated production. But one weird thing about their machines used blood as fuel. And Butchers had animal farms specifically for powering them. But despite that, Butchers are very calm and polite humanoid, and they explained that blood was the only source of power and they were forced to use it. Also Butchers said that NeepMeat is perfectly habitable for different creatures including us. NASA will explore NeepMeat and Butcher's technology under their consent.
